YOUR DEVICES, CONNECTED...

SMART SOLUTIONS FOR ELEVATING YOUR BUSINESS

The digital revolution has just reached the next level. Connectivity and processing power are increasing exponentially. Every day new opportunities arise for integrating systems and improving communication and services. ESL Smart Solutions Ltd. is at the forefront of this exciting new wave.

ESL Smart Solutions is part of the ESL Group, a leading provider of IT solutions and services, headquartered in the UK. We have a wide range of core competencies under one roof, drawing from an experience of over two decades. Our expertise covers secure hardware, software and connectivity solutions. Our range of products and services ensures fast development and delivery processes, low overheads and easy management.

The scope of our expertise and products is what makes us the systems integrator for your IoT and M2M needs. We can implement the exact solution you require from the ground up, or we can take your existing infrastructure and integrate it seamlessly with our IoT gateway and database management software. ESL Smart Solutions can take your business to the next level. Let us make your devices part of the connected world.

Your device data can be transferred to the EventMan Cloud™ directly or via a local EMap™ gateway. EventMan™ will then extract the core information, log it for full traceability and automatically escalate key events to the relevant end user.

YOUR INFRASTRUCTURE, IMPROVED ...

SMART PRODUCTS TO STRENGTHEN YOUR OPERATIONS

Connecting your devices means having access to more data, much faster; real-time data that will improve the efficiency of your products and services. ESL Smart Solutions is there to help you get more out of your devices, with both custom solutions and ready-made components and products.

For instance, our database management software EventMan Cloud™ can be integrated with your infrastructure for database-driven event management through the cloud. With EventMan Cloud™, it's easy to filter, analyse, process and leverage big data from multiple sources whilst reducing costs and saving time, even with complex workflows.

Our modular, expandable hardware platform EMap™ is specifically designed for rapid development of robust IoT and M2M applications. The EMap™ provides out-of-the-box connectivity to EventMan Cloud™ and supports a wide range of communication protocols, acting as a local gateway for low-power IoT and M2M devices. The EMap™ also offers local monitoring and control if the cloud connection becomes unreliable.

YOUR PROJECTS, ENHANCED...

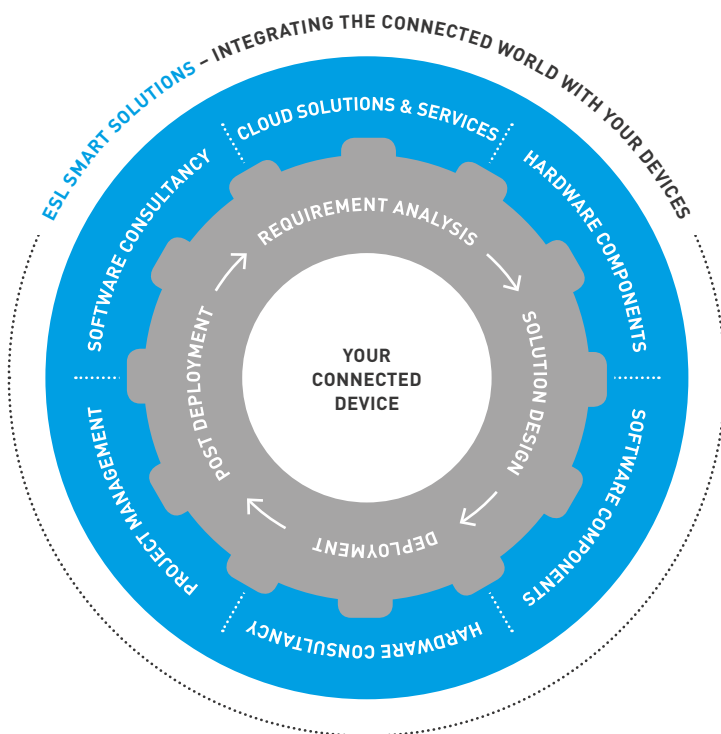

SMART SUPPORT TO BOOST YOUR SUCCESS

ESL Smart Solutions is there for the complete life cycle of your projects. Our know-how enables us to support and enhance each phase, from conception through to the successful deployment of your solution. Our cloud solutions and services cater to all your cloud-related needs securely and cost-effectively.

Our software and hardware expertise, both as consultants and as component providers, helps us to deliver a truly integrated and secure product. Our diverse range of core competencies allow us to mould a solution that best fits your needs, quickly and efficiently. This, coupled with our long-standing experience, will ensure fast time to market and always keep you ahead of the competition.

ESL Smart Solutions is your flexible, reliable partner for secure cloud IoT and M2M projects.

Get in touch with us and let us show you how we can integrate your devices with the connected world.
